# Digital Signal Processing Assignment 1

Syed Saqib Habeeb BM20BTECH11015

# **CONTENTS**

1	Software Installation	1
2	Digital Filter	1
3	Difference Equation	2
4	Z-transform	3
5	Impulse Response	6
6	DFT and FFT	7
7	Exercises	7

Abstract—This manual is the soution of the assignment of the course EE3900 assignment 1.

#### 1 Software Installation

Run the following commands

sudo apt-get update sudo apt-get install libffi-dev libsndfile1 python3 -scipy python3-numpy python3-matplotlib sudo pip install cffi pysoundfile

# 2 Digital Filter

2.1 Download the sound file from

wget https://raw.githubusercontent.com/ gadepall/ EE1310/master/filter/codes/Sound Noise.wav

2.2 You will find a spectrogram at https: //academo.org/demos/spectrum-analyzer. Upload the sound file that you downloaded in Problem 2.1 in the spectrogram and play. Observe the spectrogram. What do you find?

**Solution:** There are a lot of yellow lines between 440 Hz to 5.1 KHz. These represent the synthesizer key tones. Also, the key strokes are audible along with background noise.

2.3 Write the python code for removal of out of band noise and execute the code.

```
Solution:
import soundfile as sf
from scipy import signal
#read .wav file
input signal,fs = sf.read('Sound Noise.wav'
#sampling frequency of Input signal
sampl freq=fs
#order of the filter
order=4
#cutoff frquency 4kHz
cutoff freq=4000.0
#digital frequency
Wn=2*cutoff freq/sampl freq
# b and a are numerator and denominator
   polynomials respectively
b, a = signal.butter(order, Wn, 'low')
#filter the input signal with butterworth filter
output signal = signal.filtfilt(b, a,
   input signal)
#output \ signal = signal.lfilter(b, a,
   input signal)
#write the output signal into .wav file
sf.write('Sound With ReducedNoise.wav',
   output signal, fs)
```

2.4 The output of the python script Problem 2.3 in is the audio file Sound With ReducedNoise.wav. Play the file in the spectrogram in Problem 2.2. What do you observe?

**Solution:** The key strokes as well as background noise is subdued in the audio. Also, the signal is blank for frequencies above 5.1 kHz.

### 3 DIFFERENCE EQUATION

# 3.1 Let

$$x(n) = \left\{ \begin{array}{l} 1, 2, 3, 4, 2, 1 \\ \uparrow \end{array} \right\} \tag{3.1}$$

Sketch x(n).

#### **Solution:**

import numpy as np **import** matplotlib.pyplot as plt #If using termux #import subprocess #import shlex #end if x=np.array([1.0,2.0,3.0,4.0,2.0,1.0])k = 20y = np.zeros(20)#subplots plt.subplot(2, 1, 1)plt.stem(range(0,6),x) plt.title('Digital\_Filter\_Input-Output') plt.ylabel('\$x(n)\$')plt.grid()# minor plt.show()

# 3.2 Let

$$y(n) + \frac{1}{2}y(n-1) = x(n) + x(n-2),$$
  
$$y(n) = 0, n < 0 \quad (3.2)$$

Sketch y(n).

**Solution:** The following code yields Fig. 3.3.

```
import numpy as np
import matplotlib.pyplot as plt
#If using termux
#import subprocess
```

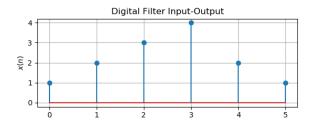

Fig. 3.1

```
#import shlex
#end if
x=np.array([1.0,2.0,3.0,4.0,2.0,1.0])
k = 20
y = np.zeros(20)
y[0] = x[0]
y[1] = -0.5*y[0]+x[1]
for n in range(2,k-1):
        if n < 6:
                 y[n] = -0.5*y[n-1]+x[n]+x
                     [n-2]
        elif n > 5 and n < 8:
                 y[n] = -0.5*y[n-1]+x[n-2]
        else:
                 y[n] = -0.5*y[n-1]
print(y)
#subplots
plt.subplot(2, 1, 1)
plt.stem(range(0,6),x)
plt.title('Digital_Filter_Input-Output')
plt.ylabel('$x(n)$')
plt.grid()# minor
plt.subplot(2, 1, 2)
```

```
plt.stem(range(0,k),y)
plt.xlabel('$n$')
plt.ylabel('$y(n)$')
plt.grid()# minor

#If using termux

#else
plt.show()
```

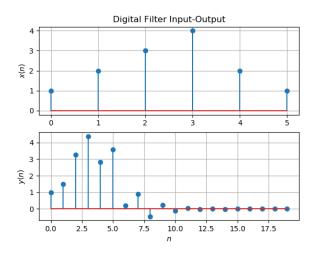

Fig. 3.2

3.3 Repeat the above exercise using a C code. **Solution:** 

```
#include <stdio.h>
// A function which calculates y[i] takings
    array x and and i as parameters
float calculatey(int* p1,int n){
        int y=0;
         if(n==0){y = *p1;}
         else if(n==1){y=*(p1+1)+calculatey(
             p1,0);
         else if(n<6)\{y = *(p1+n-1) + *(p1+n-1)\}
             n-3) - calculatey(p1,n-1)/2.0;}
    else \{y = -\text{calculatey}(p_1, n-1)/2.0;\}
         return y;
int main(){
         FILE* fp;
    const int number Of Points=20;
    int x[] = \{1,2,3,4,2,1\};
    float y[number Of Points];
```

```
int i;
for(int i=0;i<number_Of_Points;i++){
        y[i]=calculatey(x,i);}

        // opening file
    fp = fopen("y(n).dat","w");

        // writing to the file
    for(i=0;i<number_Of_Points;i++){
        fprintf(fp,"%f\n",y[i]);
    }

        // closing file
    fclose(fp);
    return 0;
}</pre>
```

For plotting the data we can use the python code below

```
import matplotlib.pyplot as plt
import numpy as np
y = np.loadtxt("y(n).dat",dtype = "double")
x = np.array([1,2,3,4,2,1])
# ploting graphs
plt.subplot(211)
plt.stem(np.arange(len(x)),x)
plt.xlabel("n")
plt.ylabel("$x(n)$")
plt.grid()
plt.subplot(212)
plt.stem(np.arange(len(y)),y)
plt.xlabel("n")
plt.ylabel("$y(n)$")
plt.grid()
plt.show()
```

# 4 Z-TRANSFORM

4.1 The Z-transform of x(n) is defined as

$$X(z) = \mathcal{Z}\{x(n)\} = \sum_{n=-\infty}^{\infty} x(n)z^{-n}$$
 (4.1)

Show that

$$Z{x(n-1)} = z^{-1}X(z)$$
 (4.2)

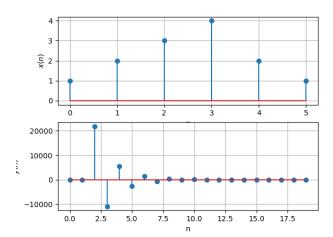

Fig. 3.3

and find

$$\mathcal{Z}\{x(n-k)\}\tag{4.3}$$

**Solution:** From (4.1),

$$\mathcal{Z}\{x(n-k)\} = \sum_{n=-\infty}^{\infty} x(n-1)z^{-n}$$

$$= \sum_{n=-\infty}^{\infty} x(n)z^{-n-1} = z^{-1} \sum_{n=-\infty}^{\infty} x(n)z^{-n}$$
(4.4)

resulting in (4.2). Similarly, it can be shown that

$$Z\{x(n-k)\} = z^{-k}X(z)$$
 (4.6)

4.2 Obtain X(z) for x(n) defined in problem 3.1. **Solution:** 

Given that

$$x(n) = \left\{ 1, 2, 3, 4, 2, 1 \right\} \tag{4.7}$$

$$X(z) = \sum_{n=-\infty}^{\infty} x(n)z^{-n}$$

$$= z^{-0} + 2z^{-1} + 3z^{-2} + 4z^{-3} + 2z^{-4} + 1z^{-5}$$

$$= 1 + 2z^{-1} + 3z^{-2} + 4z^{-3} + 2z^{-4} + 1z^{-5}$$

$$(4.10)$$

4.3 Find

$$H(z) = \frac{Y(z)}{X(z)} \tag{4.11}$$

from (3.2) assuming that the Z-transform is a linear operation.

**Solution:** Applying (4.6) in (3.2),

$$Y(z) + \frac{1}{2}z^{-1}Y(z) = X(z) + z^{-2}X(z)$$
 (4.12)

$$\implies \frac{Y(z)}{X(z)} = \frac{1 + z^{-2}}{1 + \frac{1}{2}z^{-1}} \tag{4.13}$$

4.4 Find the Z transform of

$$\delta(n) = \begin{cases} 1 & n = 0 \\ 0 & \text{otherwise} \end{cases}$$
 (4.14)

and show that the Z-transform of

$$u(n) = \begin{cases} 1 & n \ge 0 \\ 0 & \text{otherwise} \end{cases}$$
 (4.15)

is

$$U(z) = \frac{1}{1 - z^{-1}}, \quad |z| > 1 \tag{4.16}$$

**Solution:** It is easy to show that

$$\delta(n) \stackrel{\mathcal{Z}}{\rightleftharpoons} 1 \tag{4.17}$$

and from (4.15),

$$U(z) = \sum_{n=0}^{\infty} z^{-n}$$
 (4.18)

$$= \frac{1}{1 - z^{-1}}, \quad |z| > 1 \tag{4.19}$$

using the fomula for the sum of an infinite geometric progression.

4.5 Show that

$$a^n u(n) \stackrel{Z}{\rightleftharpoons} \frac{1}{1 - az^{-1}} \quad |z| > |a|$$
 (4.20)

#### **Solution:**

Given that,

$$f(n) = a^n u(n) \tag{4.21}$$

and u(n) is a unit step function.

Taking the Z transform of f(n) we get,

$$U(z) = \sum_{n = -\infty}^{\infty} a^n u(n) z^{-n}$$
 (4.22)

$$=\sum_{n=-\infty}^{\infty} a^n z^{-n} \tag{4.23}$$

$$= 1 + az^{-1} + a^2z^{-2} + \dots (4.24)$$

$$= \frac{1}{1 - az^{-1}}, \quad \left| az^{-1} \right| < 1 \tag{4.25}$$

$$= \frac{1}{1 - az^{-1}}, \quad |a| < |z| \tag{4.26}$$

4.6 Let

$$H(e^{j\omega}) = H(z = e^{j\omega}).$$
 (4.27)

Plot  $|H(e^{j\omega})|$ . Is it periodic? If so, find the period.  $H(e^{j\omega})$  is known as the *Discret Time Fourier Transform* (DTFT) of x(n).

**Solution:** The following code plots Fig. 4.6.

import numpy as np

**import** matplotlib.pyplot as plt

#DTFT

 $\mathbf{def}\ \mathbf{H}(\mathbf{z})$ :

num = np.polyval([1,0,1],z\*\*(-1)) den = np.polyval([0.5,1],z\*\*(-1))

H = num/den

return H

#Input and Output

omega = np.linspace(-3\*np.pi,3\*np.pi,1e2)

#subplots

plt.plot(omega, **abs**(H(np.exp(1j\*omega)))) plt.title('Filter\_Frequency\_Response')

pit.title(Filter\_Frequency\_Respo

plt.xlabel('\$\omega\$')

 $plt.ylabel('\$|H(e^{\star (\mbox{\mbox{$\mbox{$\mbox{$}}}})|_\$')$ 

plt.grid()

plt.show()

We know that

$$H(z) = \frac{1 + z^{-2}}{1 + \frac{1}{2}z^{-1}}$$
 (4.28)

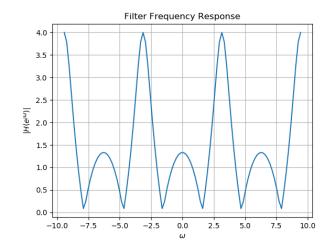

Fig. 4.6:  $|H(e^{j\omega})|$ 

then.

$$H(e^{jw}) = \frac{1 + e^{-2jw}}{1 + \frac{1}{2}e^{-jw}}$$
(4.29)

$$= \frac{1 + e^{2jw}}{e^{2jw} + \frac{1}{2}e^{jw}} \tag{4.30}$$

$$\implies \left| H(e^{jw}) \right| = \left| \frac{1 + e^{2jw}}{e^{2jw} + \frac{1}{2}e^{jw}} \right| \tag{4.31}$$

$$= \frac{\left|1 + e^{2jw}\right|}{\left|e^{2jw} + \frac{1}{2}e^{jw}\right|}$$

$$= \frac{\left|\cos 2w + 1 + 2j\sin w\right| * 2}{\left|e^{jw} + 1\right|}$$
(4.32)

$$=\frac{|cosw + jsinw| * 4cosw}{|2cosw + 1 + 2jsinw|}$$
(4.34)

(4.33)

$$= \frac{4\cos w}{\sqrt{(2\cos w + 1)^2 + 4\sin^2 w}}$$
(4.35)

$$=\frac{4\cos w}{\sqrt{5+4\cos w}}\tag{4.36}$$

Therefore

$$H(e^{jw}) = \frac{4\cos w}{\sqrt{5 + 4\cos w}} \tag{4.37}$$

The period of this trignometric function is  $2\pi$  4.7 Express h(n) in terms of  $H(e^{j\omega})$ .

#### 5 IMPULSE RESPONSE

5.1 Using long division, find

$$h(n), \quad n < 5 \tag{5.1}$$

for H(z) in (4.13).

5.2 Find an expression for h(n) using H(z), given that

$$h(n) \stackrel{\mathcal{Z}}{\rightleftharpoons} H(z) \tag{5.2}$$

and there is a one to one relationship between h(n) and H(z). h(n) is known as the *impulse* response of the system defined by (3.2).

**Solution:** From (4.13),

$$H(z) = \frac{1}{1 + \frac{1}{2}z^{-1}} + \frac{z^{-2}}{1 + \frac{1}{2}z^{-1}}$$
 (5.3)

$$\implies h(n) = \left(-\frac{1}{2}\right)^n u(n) + \left(-\frac{1}{2}\right)^{n-2} u(n-2)$$
(5.4)

using (4.20) and (4.6).

5.3 Sketch h(n). Is it bounded? Justify theoreti-

**Solution:** The following code plots Fig. 5.3.

wget https://raw.githubusercontent.com/ gadepall/EE1310/master/filter/codes/hn.py

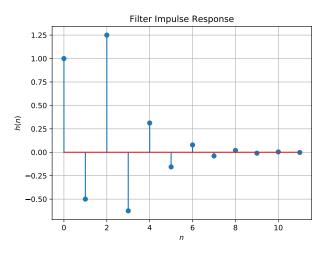

Fig. 5.3: h(n) as the inverse of H(z)

- 5.4 Convergent? Justify using the ratio test.
- 5.5 The system with h(n) is defined to be stable if 5.10 Show that

Is the system defined by (3.2) stable for the impulse response in (5.2)?

- 5.6 Verify the above result using a python code.
- 5.7 Compute and sketch h(n) using

$$h(n) + \frac{1}{2}h(n-1) = \delta(n) + \delta(n-2), \quad (5.6)$$

This is the definition of h(n).

**Solution:** The following code plots Fig. 5.7. Note that this is the same as Fig. 5.3.

wget https://raw.githubusercontent.com/ gadepall/EE1310/master/filter/codes/hndef .py

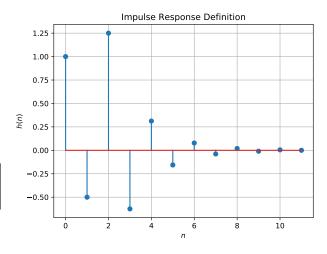

Fig. 5.7: h(n) from the definition

5.8 Compute

$$y(n) = x(n) * h(n) = \sum_{n=-\infty}^{\infty} x(k)h(n-k)$$
 (5.7)

Comment. The operation in (5.7) is known as convolution.

**Solution:** The following code plots Fig. 5.8. Note that this is the same as y(n) in Fig. 3.3.

wget https://raw.githubusercontent.com/ gadepall/EE1310/master/filter/codes/ ynconv.py

- 5.9 Express the above convolution using a Teoplitz matrix.

$$\sum_{n=-\infty}^{\infty} h(n) < \infty \qquad (5.5) \qquad y(n) = \sum_{n=-\infty}^{\infty} x(n-k)h(k) \qquad (5.8)$$

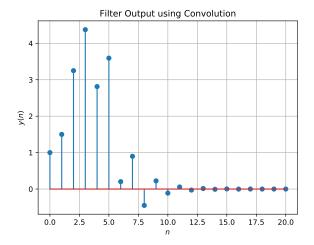

Fig. 5.8: y(n) from the definition of convolution

### 6 DFT AND FFT

6.1 Compute

$$X(k) \stackrel{\triangle}{=} \sum_{n=0}^{N-1} x(n)e^{-j2\pi kn/N}, \quad k = 0, 1, \dots, N-1$$
(6.1)

and H(k) using h(n).

6.2 Compute

$$Y(k) = X(k)H(k) \tag{6.2}$$

6.3 Compute

$$y(n) = \frac{1}{N} \sum_{k=0}^{N-1} Y(k) \cdot e^{j2\pi kn/N}, \quad n = 0, 1, \dots, N-1$$
(6.3)

**Solution:** The following code plots Fig. 5.8. Note that this is the same as y(n) in Fig. 3.3.

wget https://raw.githubusercontent.com/ gadepall/EE1310/master/**filter**/codes/yndft. py

- 6.4 Repeat the previous exercise by computing X(k), H(k) and y(n) through FFT and IFFT.
- 6.5 Wherever possible, express all the above equations as matrix equations.
- 6.6 Verify the above equations by generating the DFT matrix in python.

#### 7 Exercises

Answer the following questions by looking at the python code in Problem 2.3.

7.1 The command

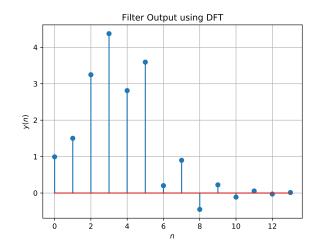

Fig. 6.3: y(n) from the DFT

in Problem 2.3 is executed through the following difference equation

$$\sum_{m=0}^{M} a(m) y(n-m) = \sum_{k=0}^{N} b(k) x(n-k) \quad (7.1)$$

where the input signal is x(n) and the output signal is y(n) with initial values all 0. Replace **signal.filtfilt** with your own routine and verify.

- 7.2 Repeat all the exercises in the previous sections for the above a and b.
- 7.3 What is the sampling frequency of the input signal?

**Solution:** Sampling frequency(fs)=44.1kHZ.

7.4 What is type, order and cutoff-frequency of the above butterworth filter

**Solution:** The given butterworth filter is low pass with order=2 and cutoff-frequency=4kHz.

7.5 Modifying the code with different input parameters and to get the best possible output.
